PRIMUS

ARCUS150T | SETUP

1

Initial setup

System requirements:

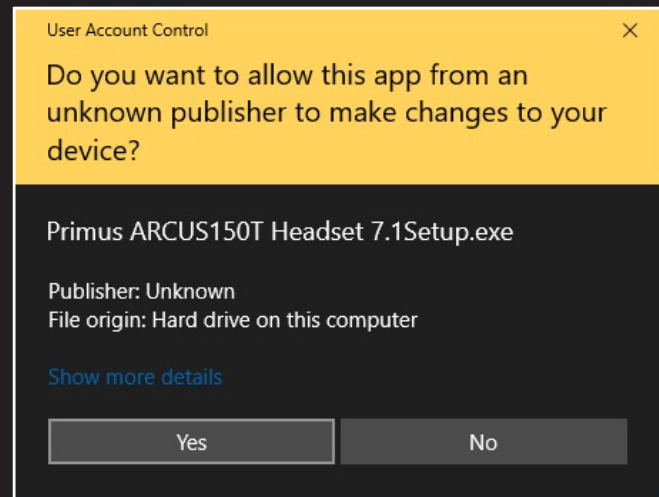

Windows XP / 7 / 8 / 8.1 / 10

1. Turn on your computer.
2. Go to www.primusgaming.com/software to download the driver software.

3. Run the set up program and follow the onscreen installation prompts.

4. Once the software installation is complete, a screen will be displayed notifying the user to restart the computer, in order to allow changes to take effect.

5. Connect the headset to the USB port of your computer after the system has finished rebooting.

2

Configuration tool

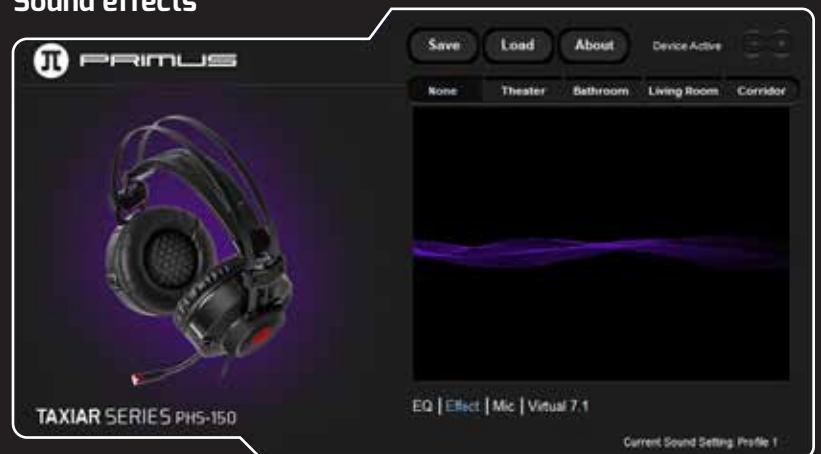

This gaming software allows you to configure the headset through a single user-friendly application.

Main equalizer

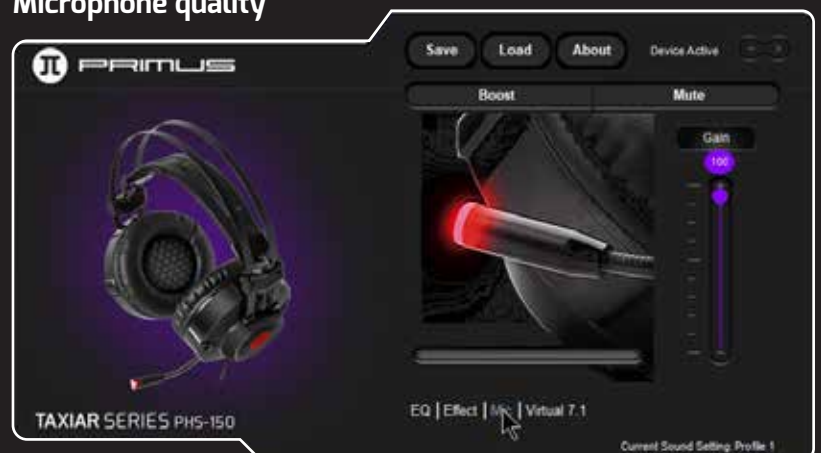

It allows the user to configure four different sound profiles by adjusting the frequency sliders up or down the dB scale.

Sound effects

- The default parameter on this menu is set to **None**.
- This headset virtually recreates the audio atmosphere of different settings, such as **Movie theater**, **Bathroom**, **Living room** or **Corridor**.

Microphone quality

- Dynamic chat boost, mute and gain controls can be set independently in this interface.

Virtual 7.1

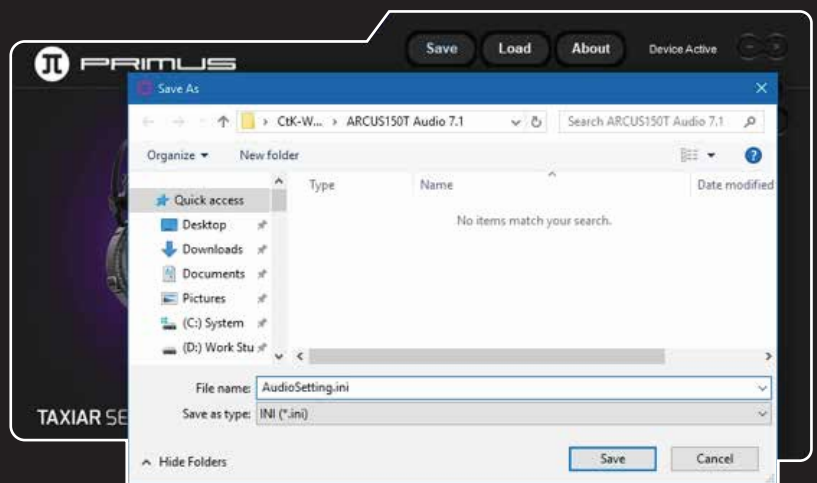

- The virtual speaker shifter is designed to make the sound rotate clockwise or counterclockwise in each driver for a more realistic and immersive sound experience.

3

Saving and loading customized settings.

- After all parameters have been configured, click on the **Save** button to backup your settings.

- Click on the **Load** button to recall a backup configuration file.
- After selecting the file, open it to load and apply the customized settings to the audio device, as illustrated below.

- Enter in a file name and then press **Save** to store it in the computer. You can save as many configurations as you want.
